

Hinemos Maintenance Support Services

Hinemos Overview

Hinemos is an operations management tool intended to operate multiple computers with the image of a single computer. It provides users with a feature to register computers in groups depending on the operation purposes, and an environment that is easy to monitor or operate with a GUI corresponding to the operation purpose. Use of Hinemos enables groups of business systems comprising multiple computers with differing purposes to achieve efficient operation in fewer steps.

Services and features provided by Hinemos

- Complete computer management solution such as monitoring system resources, system usage, and managing server jobs
- Freely downloadable open source software
- Many features for computer system management
- Easy to use with an intuitive simplistic UI design

Furthermore, by using Hinemos maintenance support service and various additional options, we guarantee greater efficiency of Hinemos utilization in business situations.
